-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 30 November 2006.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-18 is/are pending in the application.
- 4a) Of the above claim(s) 16-18 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-15 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 05 May 2006 is/are: a) ☐ accepted or b) ☒ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 30, 2006 has been entered.

Drawings

New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because newly submitted Figure 3 is still not easily discernable and does not contribute to a greater understanding of the claimed invention. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Response to Arguments

Applicant's arguments filed November 30, 2006 have been fully considered but they are not persuasive.

Art Unit: 2883

Specifically, applicants have not made any substantial arguments, but have merely stated that the claims have been amended without any arguments on their behalf. As addressed in the following rejection sections, examiner contends that the claim amendments have not served to distinguish the claimed invention from the cited prior art.

However, whereas the amendments address the previous claim objections, examiner accepts said amendments and all previous claim objections are hereby withdrawn.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, and 14 are rejected under 35 U.S.C. 102(e) as being anticipated by US Pre Grant Publication to Konstadinidis et al., number 2005/0184411.

Regarding claim 1, Konstadinidis teaches a cable (Figures 1 and 2) for use in air blowing installation (page 1, paragraph 6 and page 4, paragraph 40) comprising: at least one transmission medium (ribbons 13 comprising fibers 14) of electrical or optical signals; and a hollow cylindrical tube (Figure 1) having an inner space containing the

Art Unit: 2883

transmission medium (as shown in Figure 2), an outer circumferential surface surrounding the inner space (as shown in Figure 2), and a plurality of recesses (12) formed on and recessing from the outer circumferential surface (Figure 1).

Regarding claim 2, Konstadinidis teaches that the transmission medium comprises an optical fiber ribbon (13) having a plurality of optical fibers (14) (page 1, paragraph 4, and page 4, paragraph 40) and a protective layer surrounding the individual optical fibers (page 2, paragraph 19).

Regarding claim 14, Konstadinidis teaches that the protective layer is formed by applying a liquid-phase UV curable resin to the plural optical fibers and irradiating ultraviolet rays to the resin (page 2, paragraph 19).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Konstadinidis in view of US Patent to Uemiya et al., number 5,345,545.

Regarding claims 3 and 4, Konstadinidis teaches the limitations of the base claim 1. Konstadinidis does not teach that the tube is made of amorphous material containing silicone. Uemiya teaches a layer surrounding optical fibers made of amorphous material containing silicone (column 4, lines 44-55). It would have been obvious to one

Art Unit: 2883

of ordinary skill in the art at the time of the invention to modify the tube of Konstadinidis with the amorphous silicone of Uemiya. The motivation would have been to provide an improved buffer layer (column 4, lines 44-55).

Claims 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Konstadinidis in view of US Patent to Szum et al., number 6,399,666.

Regarding claims 5 and 6, Konstadinidis teaches the limitations of the base claim 1. Konstadinidis does not teach that the tube is made of polycarbonate, which has a molecular weight of more than 18000. Szum teaches a layer surrounding optical fibers made of polycarbonate, which has a molecular weight of more than 18000 (column 50, line 22 – column 51 – line 18, specifically column 50, lines 64-66). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the tube of Konstadinidis with the polycarbonate of Szum. The motivation would have been to improve the ease of removing optical fibers from the tube (column 50, lines 41-44)

Claims 7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Konstadinidis in view of US Patent to Benson, Jr. et al., number 5,905,826.

Regarding claims 7 and 8, Konstadinidis teaches the limitations of the base claim 1. Konstadinidis does not teach that the tube is made of polycarbonate containing silicone, wherein the content of the silicone is in a range of 0.01 to 0.5 percent by weight based on the weight of the polycarbonate. Benson teaches a layer surrounding optical fibers made of polycarbonate containing silicone (column 6, lines 9-30). While Benson

Art Unit: 2883

does not teach that the content of the silicone is in the specific range of 0.01 to 0.5 percent by weight based on the weight of the polycarbonate, Benson does teach the overlapping range of less than 10 percent (column 6, line 25). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the tube of Konstadinidis with the polycarbonate containing silicone, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or working ranges involves only routine skill in the art. In re Aller, 105 USPQ 233. The motivation would have been to improve light transmission through the tube (column 5, line 60 – column 6, line 8).

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Konstadinidis in view of Benson as applied to claim 7 above, and further in view of US Patent to Cooke et al., number 5,561,731.

Regarding claim 9, Konstadinidis in view of Benson teaches the limitations of the base claim 1. Konstadinidis does not teach that the tube is made of polycarbonate containing silicone having a frictional coefficient of less than 1. Cooke teaches a layer surrounding optical fibers made of material having a frictional coefficient of less than 1 (column 2, lines 5-24). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the tube of Konstadinidis with the material having a frictional coefficient of less than 1 of Cooke. The motivation would have been to improve the ease of inserting fiber in the tube (column 2, lines 5-24 and column 3, lines 31-37).

Claims 10, 11, and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Konstadinidis in view of US Pre Grant Publication to Castellani et al., number 2004/0197059.

Regarding claims 10 and 11, Konstadinidis teaches the limitations of the base claim 1. Konstadinidis does not teach a water blocking filler provided in an interior empty space of the tube, wherein the water blocking filler includes a jelly compound. Castellani teaches a water blocking filler provided in an interior empty space of a tube surrounding optical fibers, wherein the water blocking filler includes a jelly compound (page 4, paragraph 56). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify cable of Konstadinidis with the water blocking filler of Castellani. The motivation would have been to reduce the possibility of water damage.

Regarding claim 13, Konstadinidis teaches the limitations of the base claim 1. Konstadinidis does not teach an outer diameter in a range of 1.5 mm to 4.0 mm. While Castellani does not teach the exact range, Castellani does teach a cable outer diameter in the overlapping range of 2.0 mm – 6.0 mm, and a preferred subset range of 2.5 mm – 4.0 mm (page 3, paragraph 50). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the cable of Konstadinidis such that the outer diameter is in a range of 1.5 mm – 4.0 mm, a subset of which is taught by Castellani, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or working ranges involves only routine skill in the art. In re Aller, 105 USPQ 233. The motivation would have been to increase the number of fibers inside the tube.

Art Unit: 2883

Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Konstadinidis in view of Cooke.

Regarding claim 12, Konstadinidis teaches the limitations of the base claim 1. Konstadinidis does not teach that the tube has a clearance in the range of 0.5 mm to 1.5 mm. Although Cooke does not teach a tube with the exact clearance range, Cooke does teach a tube surrounding optical fibers with a clearance in the overlapping range of 0 mm – 1 mm (column 8, lines 13,14; 39, 40; 62, and column 9, line 10). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the tube of Konstadinidis such that it has a clearance in a range of 0.5 mm – 1.5 mm, an overlapping range of which is taught by Cooke, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or working ranges involves only routine skill in the art. In re Aller, 105 USPQ 233. The motivation would have been to improve the ease of insertion of the fibers in the tube.

Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over US Pre Grant Publication to Velikov, number 2002/0131703.

Regarding claim 15, Konstadinidis teaches the limitations of the base claim 1. Konstadinidis does not teach that the plurality of recesses has a crater shape. Velikov teaches a cable comprising a plurality of crater-shaped recesses (page 2, paragraph 22). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the cable of Konstadinidis with the crater-shaped recesses of

Art Unit: 2883

Velikov. The motivation would have been to improve the alignment of the fibers (page 2, paragraph 22).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jerry Martin Blevins whose telephone number is 571-272-8581. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Frank G. Font can be reached on 571-272-2415. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
